Scorecard helps us enforce best practices that can guard against

Malicious maintainers

Build system compromises

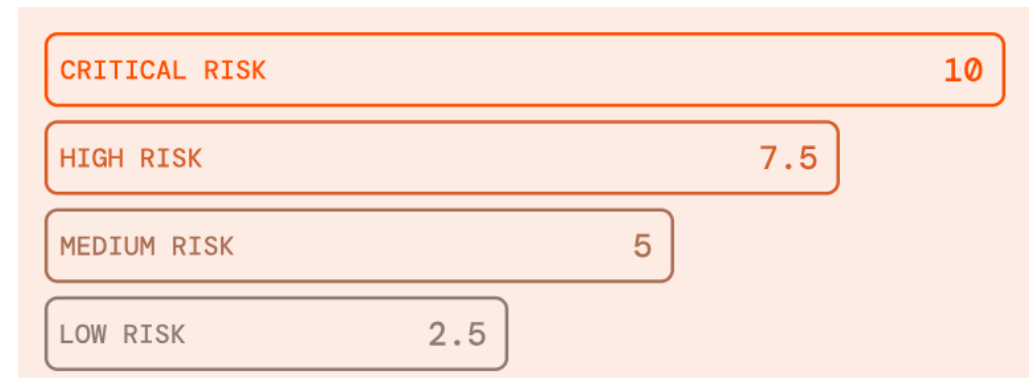

Source code compromises

Malicious packages

How it works

- ▶ Checks security across source code, build, dependencies, testing, and maintenance
- ▶ Each check gives a score (0–10) with a risk level
- ▶ Scores are combined into an overall security score
- ▶ Provides fix suggestions to improve security and development practices

How to run

- ▶ Run automatically on code you own **using the GitHub Action**
- ▶ Run manually on (y)our (or somebody else's) project **via the Command Line**
